### Powerful, yet simple, quick and easy to use

We use the Formyoula App to collect contacts whilst our staff are out and about, and add the information straight to Salesforce. Formyoula forms are easy to create and integrate with Salesforce, with multiple objects and supporting logic where needed. The support for multiple platforms is great too.

### Formyoula forms for Patient Surveys & PDF Capability

Hi All, We are working on Formyoula for almost a year now. It has been a great experience. Support Team is very proactive and always support any solution to avoid any blocker with the functionality. They keep on doing releases every Quarter, and they keep on enhancing the quality of Formyoula forms. I have never experienced any delay in terms of supporting during our UAT phase or PROD deployments. Suggestion / Enhancement for the future release. #1. We need to make sure Import/Export capability should be more enhanced in terms of fetching all details from forms. #2. Need PDF Customization and JS customization of PDF should be imported and exported along with JSON #3. Connections on FORMYOUOLA fields should be automatically referenced when importing the form back to any Target Environment, as doing it manually again is time-consuming. #4. Automatically selection of Record Name if Lookup field is selected and ID is sent to Pre-population on forms, using URL. Thanks, really felt great to select these forms for our Project.

### Totally worth it!!!

I can't believe how amazing this app is. We have installers that travel a lot. Notes didn't always get into Salesforce since they are always moving. They all now use forms that I created using Formyoula that automatically fill in all needed fields in Salesforce. It saves them time and brings in accurate and time sensitive information right away. We can even save installation pictures in Salesforce. Great job creating this!

### Great Option

Formyoula has been just what we needed. Creating forms, mapping them to Salesforce, and obtaining leads with no internet connection has been very easy with Formyoula. Their customer support is courteous and quick to respond. They are the best-priced option out there, I found other companies that were going to charge over \$1,000 per user. I highly recommend Formyoula.

### Good product and exceptional support

We are hoping to use forms for field service techs to use when out on site. Formyoula suits us very well as you can attach photos, capture signatures, repeat fields, work offline and link to salesforce easily. We are currently working with Gatis to get the forms to pre-fill from a salesforce record when a link is opened from within salesforce. Once this has been achieved, I will be updating this to a 5 star. So far, the product seems excellent and is very flexible. I have been very impressed with their support. A special mention to Gatis, whom I have asked loads of questions of, and he never fails to help without any trace of frustration! Thank you very much! It is a shame they don't offer phone support to smaller users and direct you to their website resources but in fairness, their resources are good and their email support is excellent. Overall would thoroughly recommend them, having researched other form providers, Formyoula win by a mile!

#### Excellent product and customer service

Our college has been using this for fairly straightforward offline form collection and postings, with excellent results. I am now using it to develop a complex form application that has to pull from, create, and/or update numerous Salesforce objects. Any questions or roadblocks I have run into have been quickly and patiently addressed by Gatis and Richard. The customer service is second to none and they really have an interest in seeing their clients succeed with this tool. They also have a very extensive collection of support documents and videos. As far as the functionality, it would have taken a whole lot longer to build the form out in VisualForce/Apex - I would not have been a 10th of where I am so far. I'm still building out the app but hopefully all will go well. Like any RAD tool, you do lose a little flexibility - but there are times when complexity gets too brittle to maintain, and my goal is to create a forms app that a functional admin, as opposed to a developer, will be able to maintain - a fair trade off. I was originally going to do a lot of the business logic in SFDC after submission, but was able to incorporate a lot right into the form by conditional settings on the SFDC data connections, and build in field dependencies, which prevented the need for further coding. Some things to be aware of: I do not believe you can use client side field validation (regex/javascript) , and I would like to see some better compatibility with quirky salesforce fields like address, phone number, and country/state picklists if at all possible. If you want to create cascading dependent lookups on SFDC objects, you will also need to copy/paste merge field IDs from Formyoula in your criteria. It does pretty much everything else with relative ease. I am very happy with this tool and it has exceeded my expectations - I'm still learning about so many things I didn't know it was capable of. Thanks so much for this valuable tool!

#### I absolutely love this application.

[wow] This might be my favorite application that I've added in 13-14 years as a Salesforce user/admin. I had looked at formyoula 2 years ago almost to the day. It was pretty good. If you haven't looked at it in a while, take a second glance. I'm dumbfounded with how much this app can do. In my first 30-45 minutes, including the learning curve, I had a serviceable version of a form that: --Replaced an important, but annoying, paper form that held about 18-20 fields with key data for our sales team -> install team hand-off. In lieu of bad sketches or emailing a picture, these are now uploaded into the Opportunity from the field, or whenever we connect again. --Removed another secondary action when sales returned to the shop that required them to create a new record on a Custom Object where they needed to add some chemistry info, etc. Those two things alone would have made the whole thing worth it, but it also allows us to expose more CRM functions. So, --Optionally, log tasks as a repeat group. --Optionally, create tasks as a repeat group. --Optionally, create events as a repeat group. --Optionally, upload an image of what we either call a quote or contract. If contract, enter that date (second iteration through Opportunity lookup) and that date triggers all of our workflow rules. Oh, and I'm able to do that all off of an offline lookup. This thing is incredible. [/wow]

#### VERY Impressed! Superior customer service and support

I'm finishing my 30 day trial and am so excited to launch the Forms. We have a pretty unique Salesforce Environment but with assistance from the Formyoula team (specifically- Gatis) I was able to create all we need for our sales team to work in the field. The forms created will eliminate the need to take tedious notes or fill out long applications just to re-enter into the computer- The data collected using formyoula will be already waiting for them in Salesforce when they get home! Thank you FORMYOULA!

#### Awesome Sauce!

Very simple, user-friendly interface. We've been using Formyoula for about 3 months now and absolutely love it. Richard and Gatis provide EXCELLENT support and service. I highly recommend these forms to increase productivity and efficiency!

### Flexible & Excellent Support

Formyoula helps with a ton of use-cases, from landing page forms, to enabling internal form submissions, to facilitating partner referral programs. I especially like how easy it is to integrate with any object (standard and custom), including multi-level data structures from one form submission: for example creating a new lead and adding it to campaign. Support is very responsive and genuinely committed to my success. Anytime I think something cannot be done, they find a way to do it with a sense of urgency.

### We love Formyoula

Formyoula is an amazing product with amazing support. Offline lookups are a game changer. Form creation is quick and easy, with tons of powerful functionality available when you need it. They roll out frequent updates that make a real difference and improve the product. The team at Formyoula provides fast and helpful support and is always willing to go above and beyond to help us find a resolution to even our most complicated requests. Staff training is a breeze because the UI is so intuitive. We're so excited by what Formyoula is helping our organization accomplish, and we know we've only begun to scratch the surface.

### Formyoula is fantastic but the support is even better!

I seriously recommend Formyoula to anyone looking at mobile tools. I've been using Formyoula for at least 3 months now. Having used a couple of other tools I must say that this app is great. There is very little, if anything at all, to be desired. This has made mobile data collection a dream. 2-way integration with an offline data tool is challenging but through Formyoula's lookup it is possible. The kicker for me is the ease with which related records can be created through Formyoula's sequencing. The cherry on top has to be the great support that Formyoula offers. Richard, Kristina & Gatis have all been great; one would think that at this point Gatis would be tired of me!

### Very Great customer service, and Superb App very easy to use.

First of all, I want to thank the Formyoula support team for their assistance, availability, and especially their reactivity. Gatis, Richard and Kristina thank you a lot. Also, I would like to add I am very satisfied with app. Merci beaucoup :) Hajar

### Time Saver / Prompt Service / Great Value

I'm writing as a web developer and an owner of a Web and IT company. Formyoula is an excellent choice for those who are strapped on time and who appreciate prompt service. The mobile forms are very easy to use utilizing drag and drop and mobile offline features. We plan on using Formyoula as our official mobile forms company for all of existing clients. Sincerely, Donny Munoz (CTO of eDirect, Inc).

### Great App and Excellent Customer Service

This app is mobile friendly and incredibly easy to use - it's just what my org was looking for! We were using FormAssembly before but switched to Formyoula because it has the ability to create look-up fields that connect to SF. Formyoula is also very affordable and they have an excellent non-profit discount which my company greatly appreciated. On top of all this they also have excellent customer service. I used the chat feature to inquire about getting the nonprofit discount code and the CEO got back to me in less than 2 minutes! I highly recommend this app to anyone looking for a form assembly tool that connects to SF.

### Quick and Effective and Fantastic Support

I had a need to create an offline financial factfind for my sales team after paper copies were taking too long to come back, weren't readable, and then had to be processed by the admin team. Formyoula sorted all these issues. In one afternoon I created an 18 page form with over 200 fields that feeds into multiple contacts in Salesforce complete with an attached Branded pdf for audit purposes and to allow multiple users to use the form for opportunity development. Richard and Gatis were on hand to have powerful remote e-conferences which allowed me to solve some operational issues at my end and were first class in everything they did. I am now rolling out the offline forms to my 8 guys in my sales team and cant wait to see the ROI. Thanks Formyoula

### Best App Support On Salesforce

This app has become an absolute necessity for my workplace. We were needing a way to map complex paperwork into Salesforce, link it to custom objects, and the ability to store data while offline - Formyoula was the perfect solution for us. The support team responds quickly and accurately, often within the same hour that a question is sent to them. I can't say enough about this app, I would HIGHLY recommend it for anybody who is looking for an efficient way to collect and store data.

### Incredibly easy to use, and even faster to deploy.

On a Friday morning, I was told that I had to deploy an offline capable iPad form for an event the next day. We would be capturing over 200 leads and did not want to use pen and paper. After looking at iForms and realizing that I'd still have to sync the data manually into salesforce, I decided to try formyoula. 30 minutes after signing up, I had my first form built and was pushing data from my iPad directly into a custom object on salesforce.com. Fast forward 3 months and we are now capturing over 5,000 leads a week with over 100 users. Some of the great features: 1) Syncing data into salesforce.com is seamless. Full support of custom objects and custom fields. 2) Best Form builder I've ever seen. Very easy to use, input types include photos and signature capture, and it allows for the display of custom images so you can brand your forms. 3) Geo-tagging feeds right into salesforce and lets you use Distance calculation formulas. 4) Off-line capture and sync works flawlessly. 5) Customer service is outstanding. Bottom line is this product just works.

### Simple, Useful, Great Customer Service

Using this app I was able to create a complex form that involved mapping fields to two separate custom objects. I couldn't figure it out at first, but got immediate response from customer service and they published a new article in their knowledge base just for my use case. I was very impressed!

**Matthis Herrera**

★★★★★

### Simple, Easy , Effective and awesome

Creating form with almost all features are possible in very less time , i dont think creating form can get easier than this. And the form that are created are very light and quick , so it doesn't take as much time as visual force page form , and offline feature is also awesome.

### Great functionality and Support!!

We were looking for a way to provide some of our users a way to query their customers and get this feedback to our Customer Solutions department. The Formyoula ease of use, setup and support made this the perfect choice. Richard and his team are very responsive when questions and/or issues arise. Excited about the additions that are coming so we can bring all of our Partner users under the Formyoula umbrella.

### Superb App!!!

This app has been amazing. Creating custom forms and linking them with Salesforce has been a breeze. We've been searching for an app that would support a look up function and this one does it! Great features offline and online so we don't have to stop collecting our data. I can't say enough about Formyoula, it has been very easy to use, create forms, link forms with Salesforce and the customer service is amazing. We can use forms we've created in Salesforce1, Formyoula app on iPhones, Ipads or Androids or we can use a custom web link. It is always refreshing to stumble upon customer service that is this great. They go beyond with any help we need, quick responses and never shy away from customizing features for our organization. They also have great tutorials which made it that much easier to use this app. I am happy I came across this app and I believe this will be next number 1 app for creating forms.

### Excellent App for custom forms!

Formyoula is a great solution for custom forms. Extremely easy to use and configure; it makes updating/creating records right in salesforce very easy . Formyoula is an integral part of our current development project, and despite our constant needs for changes customer service was always willing to go the extra mile and assist us by answering questions promptly and adding new features. Highly recommended!

### Great App

This app has changed the way we collect drop off/pick up information with our customers. It allows us to create personalized templates that map into our salesforce fields as well as update our fields while being online or offline! It is perfect for what we are trying to accomplish. Not only is the app very useful but the customer service has been outstanding when it comes to issues. The team is always willing to take any ideas and implement them quickly for our organization!

### Great app for collecting and organizing data

This app has been the solution to many of our needs. My users are able to collect meaningful data without forgetting important information. Moreover, I get an instant report of the data collected, and the form has look-up fields that allow my users to view accounts and their contact information stored in SalesForce. It's easy to install, and the customer service is great. Richard has gone above and beyond our expectations to customize the forms for us. Thank you Richard!
